

Superior Faux Wood Beams

Typical Faux Beam Installation

Whether you are installing beams on a flat ceiling, cathedral ceiling or creating an elaborate truss, it is very easy to do. We encourage you to visit our website at www.superiorbuildingsupplies.com to view step by step video tutorials.

Measure the inside dimension of the faux beam.

Cut blocks of wood to fit within the inside dimension.

Mount the blocks with screws onto the ceiling.

Place painters tape on the outside of the mounting block. This will help you locate the block when mounting the beam.

Raise the beam up onto the mounting blocks.

Countersink a screw through the beam into the mounting block.
